

DC Planetary Gear Motor DSMP320

The planetary gear motor DSMP320 is a high-quality motor-gear combination with the following characteristics:

- Brushed DC motor (12 Vdc or 24 Vdc)
- Motor pinion made of milled metal
- Sun gears made of milled and heat-treated metal
- 1-stage: gear stage made of sintered metal gear wheels
- Multi-stage: 1st gear stage made of plastic gear wheels (POM)
2nd to 4th gear stage made of sintered metal gear wheels
- Ball bearing and interference suppression filter
- Repeatability $\leq 2,5^\circ$
- Radial load 10 mm from flange ≤ 35 N
- Axial load ≤ 25 N
- Radial clearance $\leq 0,05$ mm
- Axial clearance $\leq 0,3$ mm
- Operating temperature: -10°C to $+60^\circ\text{C}$

The planetary gear motor can be equipped with a 2-channel Hall sensor for positioning purposes.

Dimensioning

Option: 2-channel Hall sensor

Optionally, the gear motor can be equipped with a magnetic 2-channel Hall sensor. It provides two channels offset by 90°. The Hall sensor has a diameter of 32.2 mm and a depth of approx. 14.2 mm and accordingly lengthens the geared motor by this value.
