# Linear actuator DSZY2-STD (Standard)

DSZY2 electric linear actuators are required in a wide variety of applications. Therefore, it is available in six models:

- 1. DSZY2-STD (Standard)
- (for all applications without position feedback) 2. DSZY2-POT
- (with potentiometer for absolute position feedback) 3. DSZY2-HS2
- (with 2-channel Hall sensor for incremental position feedback) 4. DSZY2-LT
- (with integrated limit switches)
- 5. DSZY2-LT-POT
- 6. DSZY2-LT-HS2

Equipped with a trapezoidal screw spindle (ACME screw), it is a durable and robust DC linear drive, thus achieving high self-locking. In addition, mechanical overload protection has been integrated.

#### **Installation instructions**

Please note the correct supply voltage as indicated on the electric linear actuator. It must be ensured that the load is not greater than shown in the diagram. To protect against overload, the voltage must be switched off when the maximum current is reached. This can be read in the diagram depending on the selected reduction ratio.

The piston rod is secured against rotation.

In an emergency, the linear actuator is protected by a mechanical overload clutch. The response of this clutch is expressed in a loud rattling tone.

**CAUTION:** The overload coupling is not designed for continuous use. Instead, it is intended for emergencies, for example, if current monitoring fails. The use of external limit switches is therefore strongly recommended in the standard model.

CAUTION: Please observe the correct wiring for the retraction or extension (see pin assignment in the data sheet).

The load should always be centered in the direction of movement. Transverse forces must be avoided. They always shorten the service life and can impede the function or even destroy the device in extreme cases.
