# Linear actuator DSZY2-STD (Standard)

DSZY2 electric linear actuators are required in a wide variety of applications. Therefore, it is available in six models:

- 1. DSZY2-STD (Standard)
  - (for all applications without position feedback)
- 2. DSZY2-POT
  - (with potentiometer for absolute position feedback)
- 3. DSZÝ2-HS2
  - (with 2-channel Hall sensor for incremental position feedback)
- 4. DSZY2-LT
  - (with integrated, adjustable limit switches)
- 5. DSZY2-LT-POT
- 6. DSZY2-LT-HS2

Equipped with a trapezoidal screw spindle (ACME screw), it is a durable and robust DC linear drive, thus achieving high self-locking. In addition, mechanical overload protection has been integrated.

### **Additional technical specifications**

- Thrust and tensile load up to 3,500 N
- Static load up to 7,500 N (at i=40)
- Working temperature -25 C° to +65 C°
  Duty cycle 25 % (e.g. 2 min continuous operation - 6 min pause)
- Zinc alloy casing
- Steel outer tube
- IP Code IP65 for all models (in idle state)
- CE EMV 2014/30/EU (EN 61000-6-3:2007+A1:2011)
- EN -61000-6-1:2007
- IEC 61000-4-2:2008
- IEC 61000-4-
  - 3:2006+A1:2007+A2:2100
- IEC 61000-4-8:2009

Black	Vdc "-": Piston rod extends	Vdc "+": Piston rod extends

### Front and rear connector

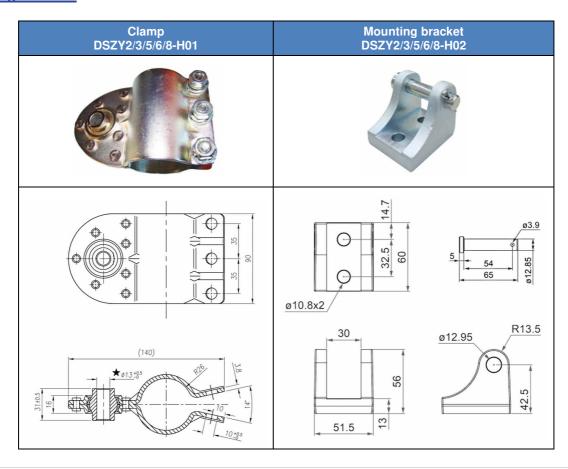

The mounting holes on the piston rod and on the gearbox cover are designed in the 0° orientation as standard. Optionally, a different angle (see picture) can be selected for the gearbox cover and piston rod. The angle between the selectable stages is 30° in each case.

Option C1 to C5 is appended to the type code: DSZY2.....-C34 The 1st number stands for the gearbox cover. The 2nd number stands for the piston rod.

#### **Installation instructions**

Please note the correct supply voltage as indicated on the electric linear actuator. It must be ensured that the load is not greater than shown in the diagram. To protect against overload, the voltage must be switched off when the maximum current is reached. This can be read in the diagram depending on the selected reduction ratio.

The piston rod is secured against rotation.

In an emergency, the linear actuator is protected by a mechanical overload clutch. The response of this clutch is expressed in a loud rattling tone.

**CAUTION:** The overload coupling is not designed for continuous use. Instead, it is intended for emergencies, for example, if current monitoring fails. The use of external limit switches is therefore strongly recommended in the standard model.

CAUTION: Please observe the correct wiring for the retraction or extension (see pin assignment in the data sheet).

The load should always be centered in the direction of movement. Transverse forces must be avoided. They always shorten the service life and can impede the function or even destroy the device in extreme cases.
